## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 59-63 and 72-73, drawn to a transformed monocot plant substantially tolerant or resistant to a reduction in water availability, and a fertile transgenic *Zea mays* plant, classified in class 800, subclass 320.1, for example.
- II. Claims 64-71 and 74-81, drawn to a method to increase water stress resistance or tolerance in monocot plant cells or plants, classified in class 800, subclass 278, for example.
- III. Claims 82-96, drawn to an expression cassette comprising a first DNA segment encoding an enzyme which catalyzes the synthesis of the osmoprotectant proline operably linked to a promoter, classified in class 435, subclass 320.1, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method to increase water stress resistance or tolerance in monocot plant cells or plants can be practiced with another materially different product, such as increasing water stress resistance or tolerance in monocot plant cells or plants by mutagenesis

using EMS. In the instant case the expression cassette comprising a first DNA segment encoding an enzyme which catalyzes the synthesis of the osmoprotectant proline can be used in a materially different process of using that product, such as a process of making a recombinant enzyme.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the transformed monocot plant substantially tolerant or resistant to a reduction in water availability can be made by another and materially different process, such as a breeding process.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
